The upward trend for many hospitals is to switch from re-useable laryngoscope blades to disposable ones. This is hoped to reduce cross-infection between patients and also to lower the workload and subsequent decontamination costs etc. for the Sterile Services Department. Although in many cases this is a good idea it is not really the perfect solution to obtain the desired result.

It has been proven many times that a re-useable handle can be the carrier of more than twice the contamination found on the laryngoscope blade. Part of the problem is the design of the handle itself. With its diamond shaped knurling designed to give a positive grip to the Anaesthetist, the handle offers hundreds of sunken surfaces which can harbour contaminants that are difficult to clean off. Reprocessing the handle can also present a variety of time consuming problems for the Sterile Services Department by way of having to remove the batteries and the lamp before washing. Then after reprocessing, making sure that the correct lamp is fitted from the other lamps, that have been removed from other instruments passing through the department, and replacing the batteries for functionality testing, then having to removing the batteries once again before the handle is finally ready for sterilisation.

Problems can still continue at the time of intubation if the disposable blade does not fit the handle – even though both parts should have been manufactured to comply with ISO 7376. In some cases the illumination can fail due to batteries nearing the end of their working life, resulting in a delay to the procedure.

We believe that the products listed on the following pages overcome many of these problems and at the same time offer a wide choice of ready to use blade sizes, styles and handles that will give very high standards of performance and illumination.

Perfecto COMBAH

Single Patient Use Laryngoscope Blade and Handle Sets

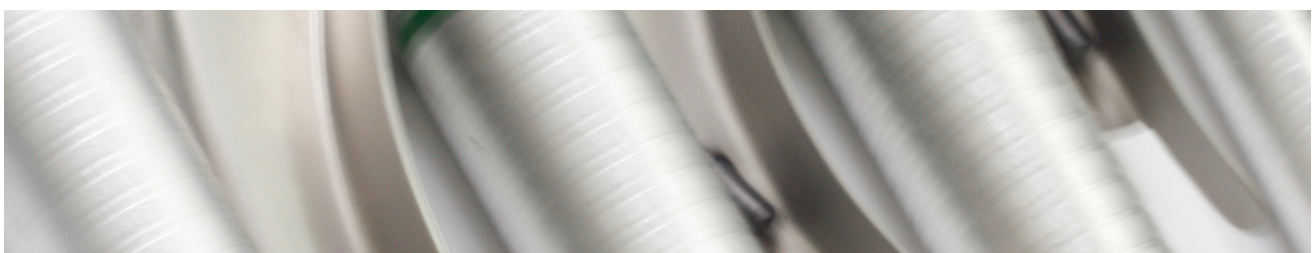

Specification

- Pre-Loaded ready to use
- Simple Test in The Bag Blade and Handle set
- Wide choice of MacIntosh and Miller Blades including Miller 000
- Choice of LED Metal Handle – Sizes: Medium, Stubby, Paediatric & Paediatric Short.
- All handles give high quality LED light and high levels of illumination
- Stainless steel blades with strong plastic heel
